# Learnflow

LearnFlow is an AI-powered learning platform that helps schools identify at-risk students early, personalize instruction at scale, and improve engagement and retention—without increasing teacher workload.

## Ideal Customers

| | |
|---|---|
| K–12 districts focused on improving achievement and intervention | Districts prioritizing MTSS/RTI initiatives |
| Schools with high student-to-teacher ratios | Institutions seeking to reduce teacher workload |

| LearnFlow is a cloud-based platform that offers: | Improves instructor experience by | The LearnFlow student experience: |
|---|---|---|
| Personal learning pathways powered by AI | Generating lesson ideas based on classroom or small group progress and needs | Covers core subjects for students from grades K-12, with appropriate technology to match student ability |
| Real-time engagement analytics that help educators identify struggling students before performance declines | Includes offline resources teachers can use to engage students outside of their devices | Tracks student usage and progress to alert instructors of at-risk students before they start to fall behind |
| Early alert system to quickly identify at-risk students | Frees up time to engage directly with students and build relationships rather than building all of their own educational content | Ingests student IEP information to generate learning content and interventions for students needing additional support |
| Integration with major Student Information Systems (SIS) platforms | Aligns content with curriculum and state standards | |
| Instructor dashboards and automated reporting | | |

## Why LearnFlow Wins

Acts as an all-in-one tool for teachers and administrators to track student progress and house instructional material. LearnFlow allows for real-time progress alerts, which is more powerful than end-of-term reporting when interventions come too late

Goes beyond just an LMS or knowledge warehouse- integrated AI allows the LearnFlow tool to generate personalized learning paths for students and house data and metrics all in one place

Created by educators for educators. Our leadership team has a combined 50+ years working in education and they know what works for educators and what doesn't

| When to Position LearnFlow | Why it Works |
|---|---|
| Concerned about student retention | Real-time progress tracking/ alerts ensure instructors are aware when students are falling behind |
| District lacks early intervention visibility | Alerts to leadership when students are at-risk and falling behind, with details areas of struggle |
| Teachers are overwhelmed with differentiation | LearnFlow uses AI to tailor lessons for each students' ability level to inspire growth |
| District Leadership are facing budget cuts | LearnFlow acts as both an instructional tool for teachers that covers all core subject areas and provides tailored lessons as well as offline resources and activities for teachers AND as a data warehouse and LMS, removing the need for multiple tools |
